

PH1 Safety Photocells

Safety Photocells direct an invisible (photoelectric) beam across your driveway. Cars, pedestrians, or other obstacles that break the beam cause the closing gate to **Stop** and then to immediately re-open. This prevents damage to your car or potential injury to others.

Once the 'obstacle' has moved out of the beams path, the autoclose function then takes over and the gate will re-close.

- Uses mHouse ECSbus technology, which provides a single colour coded terminal to attach your cable to. Perfect for non-technical DIY types.
